

Thank you for choosing **mooDy**, one of the most innovative bike accessory on the market, designed and developed by **Voidron Co.**

Please go through the step by step guide to get your “**mooDy**” ready for the ride.

Installation Checklist

1

- It is recommended that the setup and wiring be carried out by a mechanic to ensure proper and secure connections.
- Make sure that the motorcycle has been switched OFF before beginning setup.
- Also, stick the reflective tape on the motorcycle if required.

2

Setup & Wiring

- Identify a location on the back of your motorcycle where you would prefer to install “mooDy”.
- Connect the wires parallel to the brake/tail light and ensure correct battery polarity.
- Switch ON the brake/tail light to test the connectivity.

Connecting with App

3

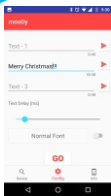

- Install **mooDy!** app from Google Play Store and launch it. The app will automatically start searching for the device.
- Turn ON the motorcycle and the brake/tail light.
- Tap on “mooDy!” to connect. Make sure that the connection is done within 10s after turning ON the device. This will take you to the “Config” screen.
- The “Info” screen lists the device and app related information.

Note: Only Android version 5.0.0 (Lollipop) or higher is supported

4

Displaying Messages

- Text fields are provided that would allow you to display up to three messages (48 characters each) on the device.
- Enter text as per your choice and tap  button next to it to send. A “Success!” message will be shown.
- Toggle “Font” button for **Bold** type text.
- Slide “Text Delay” to adjust text scrolling speed.
- Tap the “GO” button to save and disconnect from the device and return to the “Device” screen.

Changing Messages

5

- To make changes to your text, Font style or scroll speed, you will need to reconnect to the device as instructed in the previous steps.
- Previous settings are saved on the device itself so only update the text/setting as required.
- Note that the “Text Delay” and “Font” settings affect all text fields.
